Androgen Action in Prostate Cancer Donald Tindall | James Mohler Editors Androgen Action in Prostate Cancer Editors Donald Tindall 200 1st Street SW., Rochester MN 55905 USA [email protected]

Prostate Cancer Canada - Prostate Cancer Canada

Androgens can lead to prostate cancer, because they bind to and activate (turn on) the androgen receptor, a protein that is produced by the cells in the prostate gland. Once these androgen receptors have been bound to androgen, they then stimulate certain genes that cause prostate cells to grow.

Prostate Cancer Canada - Prostate Cancer Canada

Prostate Cancer Canada is the leading national foundation dedicated to the elimination of the most common cancer in men through research, advocacy, education, support and awareness.

Androgen Action in Prostate Cancer | SpringerLink

Prostate cancer represents a major health problem in men worldwide. Androgens are required for the growth and maintenance of the prostate. Androgens act by binding to the androgen receptor (AR), a nuclear receptor transcription factor present in the prostate tissues. Most prostate tumors also retain

Hormone Therapy for Prostate Cancer Fact Sheet - National ...

Androgens are also necessary for prostate cancers to grow. Androgens promote the growth of both normal and cancerous prostate cells by binding to and activating the androgen receptor, a protein that is expressed in prostate cells (1).

Hormone Therapy for Prostate Cancer - American Cancer Society

Hormone therapy is also called androgen deprivation therapy (ADT) or androgen suppression therapy. The goal is to reduce levels of male hormones, called androgens, in the body, or to stop them from affecting prostate cancer cells. Androgens stimulate prostate cancer cells to grow. The main androgens in the body are testosterone and dihydrotestosterone (DHT). Most of the androgens are

made by the testicles, but the adrenal glands (glands that sit above your kidneys) also make a
