Caring styles and responses to the eating disorder: animal models Eating disorder symptoms frequently lead carers to react in particular ways. It is understandable that responses can be the source of hostile or critical confrontations occurring in all relationship settings. Unfortunately, such responses may result in the sufferer feeling increasingly alienated and stigmatized and retreating

Animal models of eating disorders are not as well established as those that model drug addiction, but the research in this area is progressing rapidly. As with drug addiction, no single paradigm can model the complexity of pathological eating, particularly as this is a large category that can be divided into several distinct disorders. In this chapter, we discuss anorexia nervosa, bulimia
