[Anterior cruciate ligament reconstruction - Wikipedia](#)  
Anterior cruciate ligament reconstruction (ACL reconstruction) is a surgical tissue graft replacement of the anterior cruciate ligament, located in the knee, to restore its function after an injury. [1] The torn ligament is removed from the knee before the graft is inserted in an arthroscopic procedure.

[Anterior Cruciate Ligament Reconstruction: What to Expect ...](#)

Anterior cruciate ligament (ACL) surgery replaces the damaged ligament with a new ligament called a graft. In most cases, the graft is a tendon taken from your own knee or hamstring. In some cases, the graft comes from a donor.

[Anterior cruciate ligament - Wikipedia](#)

The anterior cruciate ligament (ACL) is one of a pair of cruciate ligaments (the other being the posterior cruciate ligament) in the human knee. The two ligaments are also called cruciform ligaments, as they are arranged in a crossed formation.

[Anterior Cruciate Ligament \(ACL\) Injuries - OrthoInfo - AAOS](#)

One of the most common knee injuries is an anterior cruciate ligament sprain or tear. Athletes who participate in high-demand sports like soccer, football, and basketball are more likely to injure their anterior cruciate ligaments.

[Anterior cruciate ligament reconstruction - an overview ...](#)

Anterior cruciate ligament reconstruction With the ultimate goal of ACL reconstruction being to restore knee function, the success of these procedures is dependent on a number of surgical, biomechanical, and biological factors.

[Anterior cruciate ligament reconstruction best practice: A ...](#)

Anterior cruciate ligament (ACL) reconstruction is a common operation. The aim of surgery is to restore functional stability to the ACL-deficient knee. The functional stability provided by the normal ACL is both in resisting anteroposterior translation as well as rotational subluxation. ACL reconstruction can be performed using a variety of different surgical techniques as well as different graft materials.

[Anterior Cruciate Ligament \(ACL\) Reconstruction | The Knee Doc](#)

Anterior cruciate ligament reconstruction (ACL reconstruction) is carried out after an injury to the anterior cruciate ligament. The ACL is essential for normal knee function and stability; it attaches from the bottom of the thigh bone (lateral femoral condyle of the femur) to the top

of the shin bone (medial tibial plateau) and prevents excessive forward (anterior) movement of the shin bone

### **Increasing rates of anterior cruciate ligament ...**

Rupture of the anterior cruciate ligament (ACL) is a common and debilitating injury that typically results from a non-contact event in which a previously healthy individual changes direction at speed while playing a multi-directional sport.
