While diseases of free-ranging and captive mammalian and avian wildlife species have received considerable interest in the past 25 years, those of amphibians and reptiles (collectively, the herptiles) generally have been assigned lesser importance.

Diseases of Amphibians | ILAR Journal | Oxford Academic

Many diseases of amphibians are closely related to diseases of other ectothermic vertebrates. The lower vertebrate classes share many pathogens, and in some instances, inter-class transmission (e.g., from fish to amphibian) of some infectious agents occurs. This possibility is an important epidemiological consideration for amphibian disease, and it is essential not to overlook the potential.

human diseases have a potentially zoonotic origin and 75% of global emerging human diseases have a wild animal link. Exotic pets in particular may represent a source of largely unrecognised and unrecorded microbes and macroparasites in the domestic environment. Pet markets constitute an especially high risk of infection and these risks are fundamentally uncontrollable. Future guidance may
