Ear reconstruction is a staged operation used in the treatment of ear deformities that result in a missing, underdeveloped or deformed outer ear, such as microtia or trauma to the ear.

[Ear reconstruction | Great Ormond Street Hospital](#)

Ear reconstruction is a specialised kind of plastic surgery, which is used to form an ear that looks as normal as possible. The plastic surgeon at Great Ormond Street Hospital (GOSH) will use a piece of cartilage (material that holds body structures together) from your child's ribcage to form the framework for the ear.

[Ear Reconstruction | Toronto, ON - Robert Mounsey](#)

Deformities of the ear can be corrected with ear reconstruction surgery. This is a somewhat complex procedure which also requires a certain degree of artistry on the surgeon's part, making it essential that individuals select a qualified surgeon.

[Rib Cartilage Ear Reconstruction | The International ...](#)

Medically reviewed by Dr. Youssef Tahiri. Using a child's rib cartilage to carve an ear framework has been popular for more than 40 years. Cartilage reconstruction is a technique that requires between 2 and 5 surgeries.

Medpor Ear Reconstruction Medpor Ear Implant

MEDPOR ear reconstruction is a single-stage surgery and boasts numerous advantages over the traditional procedure, leading many experts to believe it is the best surgical option for microtia. Perhaps the most notable advantage of the procedure is that it can be performed at such a young age. Ear canal repair may be performed before or during MEDPOR surgery. By addressing aural atresia at

Ear Reconstruction: Background, History of the Procedure ...

Ear reconstruction is indicated when a child with microtia has reached sufficient age, which may be between 3 and 6 years old. The latter age is typically recommended for rib cartilage reconstruction because sufficient time must be allowed for the normal ear to reach most of its adult size and act as an accurate template for the ear to be reconstructed. In addition, the costal cartilage will

About Microtia - Microtia and Ear Reconstruction

Medpor Ear Reconstruction. Medpor reconstruction uses a framework of artificial material called porous polyethylene made in one standard shape but a number of sizes. This implant was first used for ear reconstruction by Alexander Berghaus in Germany and he was the first to use the method combining the implant with a fascial flap and skin graft and continues to do so to this day. In the early
