Films of the resulting CPE:SWNT composites have electrical conductivity dependent on the SWNT loading, which can be increased with acid vapor treatment. The anionic CPE gives higher electrical conductivity for the composite immediately after deposition, whereas a more significant increase is observed for the cationic counterpart after acid treatment.

Electronic Properties of Materials

We are interested in the investigation of the electronic properties of novel materials and condensed matter quantum systems. Examples of these correlated quantum solids are low dimensional carbon systems, cuprate high-temperature superconductors, materials with colossal magnetoresistance and solar cells.
