Puberty - Wikipedia

Puberty is the process of physical changes through which a child's body matures into an adult body capable of sexual reproduction. It is initiated by hormonal signals from the brain to the gonads: the ovaries in a girl, the testes in a boy.

Body Weight Impact on Puberty: Effects of High-Calorie ...

For example, circulating IGF-I increases around the time of puberty in rats, baboons, and humans (27-29). IGF-I induces stimulatory action on GnRH neurons in rodents, and intracerebral administration of IGF-I into sexually immature female rats accelerates the timing of puberty.

Body Weight Impact on Puberty: Effects of High-Calorie ...

The average age that girls reach first menstruation (menarche) has declined over the last 150 yr by 4 yr (1, 3). Importantly, examination of this secular trend revealed that body weight at menarche was unchanged. This finding led to the critical body weight hypothesis stating that the transition to puberty is gated by a defined body weight.

Puberty - Simple English Wikipedia, the free encyclopedia

Puberty is what happens in children's bodies that changes them into adults. After puberty, people are able to make children. A girl who has gone through puberty can become pregnant. After puberty, people are able to make children.
