Glucocorticoids - Drugs.com

Glucocorticoids are a type of corticosteroid hormone that is very effective at reducing inflammation and suppressing the immune system. Inflammation is the way our immune system responds to harmful substances and trauma and is part of our healing process.

Glucocorticoids: List, Uses, Side Effects, and More

Glucocorticoids can be useful drugs for many different treatments. However, it is important to balance the need for glucocorticoid therapy against the side effects.

MyThyroid.com: Glucocorticoids

Several types of steroid hormones are produced in the adrenal glands, and in the gonads (ovaries or testicles).

The most common class of steroid hormone used to treat a broad variety of diseases is known as the glucocorticoids.

MedlinePlus, "Steroids"

Anabolic steroids are often used illegally to build muscle. But corticosteroids are used to treat a variety of health problems. Learn more about steroids.

Glucocorticoid | hormone | Britannica.com

Glucocorticoid: Glucocorticoid, any steroid hormone that is produced by the adrenal gland and known particularly for its anti-inflammatory and immunosuppressive actions.

The adrenal gland is an organ situated on top of the kidney. It consists of an outer cortex (adrenal cortex) and an inner medulla (adrenal).

Glucocorticoid | Definition of Glucocorticoid by Merriam ...

Recent Examples on the Web: Previous studies have shown that cold temperatures cause glucocorticoids to increase in a number of primates among them Japanese macaques.

Antihypotensive agent - Wikipedia

An antihypotensive agent, also known as a vasopressor agent or pressor, is any medication that tends to raise reduced blood pressure. Some antihypotensive drugs act as vasoconstrictors to increase total peripheral resistance, others sensitize adrenoreceptors to catecholamines - glucocorticoids, and the third class increase cardiac output.
