### Mitosis - Wikipedia

The primary result of mitosis and cytokinesis is the transfer of a parent cell's genome into two daughter cells. The genome is composed of a number of chromosomes, complexes of tightly coiled DNA that contain genetic information vital for proper cell function.

### Mitosis/Cell Reproduction Lab - Rutgers University

Introduction to the Lab: The emphasis of this laboratory period will be on mitosis. Mitosis is the sequence of events by which the nuclear material of one cell is distributed, by a process involving chromosomes, into two equal parts.

### Lab 3: Mitosis & Meiosis - Prentice Hall

LabBench Activity Mitosis and Meiosis, by Theresa Knapp Holzclaw. Introduction. For organisms to grow and reproduce, cells must divide. Mitosis and meiosis are both processes of cell division, but their outcomes are very different.

### Mitosis and Meiosis

In this cell division exercise, you drag and drop chromosomes to demonstrate your knowledge of the difference between mitosis and meiosis.

The main functions of mitosis are growth and repair. Some cells once fully formed do not undergo cell division, such as nerve cells and muscle cells.

### [Metaphase - Wikipedia](#)

Metaphase (from the Greek , "adjacent" and , "stage") is a stage of mitosis in the eukaryotic cell cycle in which chromosomes are at their second-most condensed and coiled stage (they are at their most condensed in anaphase). These chromosomes, carrying genetic information, align in the equator of the cell before being
