The role of nutrition in brain development is complex. The effects of most nutrient shortages depend on the extent and duration of the shortage, and in many cases, the brain's need for a particular nutrient changes throughout its development. Early shortages can reduce cell production; later shortages can affect cell size and complexity.

Nutrient deficits also affect the complex chemical

NUTRITION AND EARLY BRAIN DEVELOPMENT

Nutrition plays a crucial role at setting the stage, establishing scaffolding for the brain to work at its best – not only in childhood, but later in life. It is more than providing mere calories. Key nutrients that support neurodevelopment include protein, zinc, iron, choline, folate, iodine, vitamin A, D, B6 and B12 and LCPUFAS.
