DESCRIPTION Observing the Sun with Coronado Telescopes - DISCONTINUED - Observing the Sun with Coronado Telescopes by Philip Pugh: At around the turn of the millennium, the introduction of the Coronado range of solar telescopes and filters heralded the coming of age of amateur solar astronomy.

[Observing the Sun with Coronado\(tm\) Telescopes - Goodreads](#)

Observing the Sun with Coronado Telescopes is very outdated as far as the models of telescopes and some of the software that is suggested doesn't seem to work with my Canon 2ii, but it does have a lot of interesting information for Solar viewing and astrophotography that has led me down a few of different paths. Some worked very well, others just so so. There is a lot of repeating the same

[Telescopes and Observing One Minute Astronomer](#)

Many readers have asked about the image I used in the recent article on the Gould Belt, an image which showed a few bright stars in the belt in the constellation Scorpius reflected in a foreground mountain lake, with forest and mountains in the distance.

[101 uses of a quadratic equation: Part II](#)

If $i = \sqrt{-1}$ is imaginary, or complex, Euler's $e^{i\theta} = \cos\theta + i\sin\theta$ formula allows the exponential $e^{-i\theta}$ term to be $e^{-i\theta}$ rewritten as a combination of $\cos\theta$ and $-\sin\theta$. Another very significant application of the imaginary number i to the physical

world comes from quantum theory.
