Cellular targets at risk from free radical damage depend on the nature of the radical and its site of generation. In this review we survey cellular sources of free radicals and the reactions they can undergo and discuss cellular defenses and adaptive mechanisms.

Oxygen free radicals and other reactive oxygen species are being postulated as causal agents in an increasing number of pathological conditions. Indeed, some investigators are suggesting that highly destructive reactive oxygen species are the final common path lead ing to tissue damage following a wide variety of insults including trauma, hypoxia, ischemia, hyperoxia, radiation, some toxins, and even strenuous athletic pursuits. But, as Robert Floyd

points out, "Proof of the importance of

Role of free Radicals :: Lung Diseases : Noxygen, Science ...

The lungs are prone to oxidative damage as they are exposed to an oxygen rich environment and are continually exposed to environmental toxins. Prolonged exposure to oxygen and environmental toxins stimulate phagocytic cells in the lung to generate ROS and free radicals, which cause lipid per-oxidation. Oxidative attack on the respiratory tract lining causes cell injury and tissue damage, which
