Full Record; Other Related Research ; Abstract. That society must regulate exposures to potential human carcinogens is axiomatic. That such regulation is sometimes based on guesswork rather than realistic scientific assessment of risk is an inevitable consequence of our ignorance of the carcinogenic process. However, things are changing

Implications for Cancer Risk Assessment Roger W. Wiseman Abstract: Recent advances in the molecular genetics of cancer in humans and experimental rodents provide strong support for the somatic mutation theory of carcinogenesis. It is now known that at least two distinct classes of genes, proto-oncogenes and tumor suppressor genes, are altered in cancer cells. A number of tumor types frequently
