[Sickle cell disease - Wikipedia](#)

Sickle cell disease (SCD) is a group of blood disorders typically inherited from a person's parents. The most common type is known as sickle cell anaemia (SCA). It results in an abnormality in the oxygen-carrying protein haemoglobin found in red blood cells. This leads to a rigid, sickle-like shape under certain circumstances.

[Sickle cell disease - NHS](#)

People with sickle cell disease produce unusually shaped red blood cells that can cause problems because they don't live as long as healthy blood cells and they can become stuck in blood vessels. Sickle cell disease is a serious and lifelong condition, although long-term treatment can help manage many of the problems associated with it.
