Skin stem cells: where do they live and what can they do ...

Epidermal stem cells are currently used in clinics to grow skin for patients with life-threatening burns and genetic disorders. However, the process is difficult, expensive and the skin is not normal. Moreover, if the skin is severely damaged such as it is following burns, the transplanted skin will lack sweat glands, hair follicles and sebaceous (oil) glands.

Skin Stem Cells: Benefits, Types, Medical Applications
Skin stem cell is defined as multipotent adult skin cells which are able to self-renew or differentiate into various cell lineages of the skin. These cells are active throughout our life via skin renewal process or during skin repair after injuries. These cells reside in the epidermis and hair follicle and one of their purposes is to ensure the maintenance of adult skin and hair regeneration.

Epidermal Stem Cells of the Skin - PubMed Central (PMC)

The skin constantly renews itself throughout adult life, and the hair follicle undergoes a perpetual cycle of growth and degeneration. Stem cells (SCs) residing in the epidermis and hair follicle ensure the maintenance of adult skin homeostasis and hair regeneration, but they also participate in the repair of the epidermis after injuries.

Stem Cell Technology and the Skin | The Dermatologist

A look at the current research on plant-derived stem cell extracts and their potential role in cosmeceutical and skin care products. The ability to replace, instead of simply repairing, damaged skin cells is becoming more of a possibility with the advancements in plant stem cell technology.

Embryonic stem cells from skin cells | Understanding Genetics

Japanese scientists have turned skin cells into embryonic stem (ES) cells in mice using gene therapy. If scientists get this to work in people, all of the ethical problems associated with ES cells will melt away.

Stem cells derived from burned skin - The future of burn ...

Burn-derived stem cells are a promising new source of skin stem cells for regenerative medicine and burn-wound management. Without being limited by the common obstacles of stem cell therapies and its availability, this autologous method will revolutionize the way we treat burn patients and potentially patients with complex wounds.

5 Stem Cell Therapy Benefits, Uses & How It Works -

Dr. Axe

The sample of concentrated stem cells is then injected directly into the patient's affected, painful area allowing the cells' growth factors to go to work immediately, building new skin cells, connective tissue and so on.

Stem Cells from Skin Cells - Scientific American

Stem Cells from Skin Cells. Success may help erase practical hurdles if not ethical ones to cloning human embryonic stem cells to study and treat degenerative disorders.

Stem Cell Therapy for the Face, Skin, and Hair Clinic

...

We offer promising therapies with stem cells and growth factors both for regeneration of skin as well as hair. Hormone deficiencies are often the reason for unwelcome changes of the body.
