[Targeted Cancer Therapies Fact Sheet - National Cancer ...](#)

Targeted cancer therapies are drugs or other substances that block the growth and spread of cancer by interfering with specific molecules ("molecular targets") that are involved in the growth, progression, and spread of cancer. [What Is Targeted Cancer Therapy?](#)

Targeted therapy is a special type of chemotherapy that takes advantage of differences between normal cells and cancer cells. It's sometimes used alone, but most often other cancer treatments are used with targeted therapy. [Understanding Targeted Therapy | Cancer.Net](#)

Targeted therapy is a cancer treatment that uses drugs. But it is different from traditional chemotherapy. Targeted therapy works by targeting specific genes or proteins to help stop cancer from growing and spreading. These genes and proteins are found in cancer cells or in cells related to cancer growth, like blood vessel cells.

[Targeted therapy - Canadian Cancer Society](#)

Targeted therapy uses drugs to target specific molecules (for example, proteins) on the surface of or inside cancer cells. These molecules help send signals that tell cells to grow or divide. By targeting these molecules, the drugs stop the growth and spread of cancer cells while limiting harm to no

[Targeted therapy for breast cancer - Canadian Cancer Society](#)

Targeted therapy attacks cancer cells but doesn't usually damage healthy cells, so there are fewer and less severe side effects than with chemotherapy and radiation therapy. Chemotherapy and radiation therapy can damage healthy cells along with cancer cells.

[Targeted Therapy - National Breast Cancer Foundation](#)

How do breast cancer targeted therapies work? Breast cancer targeted therapy uses drugs that block the growth of breast cancer cells in specific ways. For example, targeted therapy may block the action of an abnormal protein (such as HER2) that stimulates the growth of breast cancer cells.

[Targeted Therapy for Cancer Patients | CTCA](#)

Targeted therapy is an evolving science, and not all cancer types may be treated with targeted drugs. Several targeted therapies have been approved by the U.S. Food and Drug Administration for use in cancer treatment, including hormone therapies, signal transduction inhibitors, apoptosis inducers, gene expression modulators, angiogenesis inhibitors and toxin delivery molecules.

[Targeted therapy - Wikipedia](#)

There are targeted therapies for colorectal cancer, head and neck cancer, breast cancer, multiple myeloma, lymphoma, prostate cancer, melanoma and other cancers. [2] Biomarkers are usually required to aid the selection of patients who will likely respond to a given targeted therapy.

#### **Targeted Therapy for Cancer - National Cancer Institute**

Targeted therapy is the foundation of precision medicine. It is a type of cancer treatment that targets the changes in cancer cells that help them grow, divide, and spread. As researchers learn more about the cell changes that drive cancer, they are better able to design promising therapies that

#### **What is a Targeted Cancer Therapy? Cancer - WebMD**

What is a Targeted Cancer Therapy? By Richard Frank, MD. The treatment of cancer has gone through different phases during the past half century. The era of effective cancer therapies began in the 1950 s with the discovery that chemotherapy drugs can lead to remissions in pediatric leukemia. At first, only one drug was administered to a patient but these rarely led to cures. When researchers
