Once closed, the clip holds the leaflets together and stops the valve from leaking. 3. Heart valve replacement. If your heart valve is too badly damaged to be repaired, surgery may be needed to replace it with a new mechanical or biological valve. Age is generally a factor in deciding which type to use biological valves are generally preferred for older people. You and your doctor will discuss the options and decide which is best for you and your circumstances.

If the symptoms of heart valve disease cannot be controlled with medication, surgery may be needed to repair or replace a defective valve in order to prevent damage to the rest of the heart (heart failure). If repair is possible, it is preferred over replacement because a repaired valve is stronger than a replacement valve. [Update: Quality of life after aortic valve replacement ...](#) Some older people with stiff, failing aortic valves (aortic stenosis) are too frail to withstand open-heart surgery to replace the valve. But a technique called transcatheter aortic valve replacement (TAVR) delivers the new valve to the heart through a catheter that's threaded into an artery in the groin and maneuvered into the heart. This less-invasive option leads to a far shorter recovery time but a slightly higher risk of stroke than the traditional surgery. As such, choosing the most

Heart valve surgery - Mayo Clinic

Heart valve surgery is a procedure to treat heart valve disease. In heart valve disease, at least one of the four heart valves that keep blood flowing in the correct direction through your heart doesn't function properly. These valves include the mitral valve, tricuspid valve, pulmonary valve and aortic valve. Each valve has flaps called leaflets, for the mitral and tricuspid valves, and cusps, for the aortic and pulmonary valves. These flaps open and close once during each heartbeat.

Percutaneous Heart Valve Replacement: An Update ...

Valvular heart disease continues to be an important health care problem. Although surgical valve replacement remains the standard treatment, minimally invasive approaches for valve repair and replacement are becoming attractive alternatives among physicians and patients.
